

Example 02

Say hello.....

This example uses a div to display either the message with the hello or a warning that nothing was entered in the text box. There is a check to see if the textbox is empty by checking the length of the value of the textbox. If value.length==0 then there is no input.

```
<h3>Example 02</h3>
<form action="#">
  <p>
    Say hello..... <input id="TBHello" type="text" />
  </p>
  <div id="DivMessage"></div>
  <input id="BtnHello" type="button" value="Say Hello" onclick="SayHello();" />
  <input id="BtnReset" type="reset" value="Clear"
  onclick="document.getElementById('DivMessage').innerHTML = ' '; " />
</form>

<script type="text/javascript">
function SayHello() {
  var myTB = document.getElementById('TBHello').value;
  var myDiv = document.getElementById('DivMessage');
  if (myTB.length == 0)
    message = "Please enter the name for someone to say hello to.";
  else
    message = "Hello " + myTB + ".";
  myDiv.innerHTML = message;
}
</script>
```
